

Game 2

Is it More, less or the same?

Object of the Game: Grasp the inverse relation between addition and subtraction. Players have to take their counters to the last row on the opposite side of the board trying not to lose any counters. The winner is the player who gets more counters to the last row.

Instructions:

This game is for two players. Each player selects a different counter colour and on opposite sides of the board they place their eight counters on purple (player 1) or green (player 2) squares of the first three rows on the game board. Each player moves the counters, in turn. On each turn the player throws a dice and has to answer the question on the square of the counter to which they want to move. The counters are moved diagonally to the same colour, one square per turn. This counter should have an adjacent empty space to move to. The type of questions are:

$$\begin{array}{l} 3 + 1 - 1 \text{ or} \\ 3 + 7 - 6 \text{ or} \\ 3 + 4 - 5 \end{array}$$

The answer must be:
'More' or
'Less' or
'The same'
It can not be a number!

If they get the answer right they can move the counter one square, if they get it wrong they lose their counter, so they remove it from the board. When a player's counter reaches the opponent's last row on the other side of the game board - this counter is 'safe'. The goal is to take as many counters as possible to the last row on the other side of the board game.

Check your answer: Each square on the board has a small letter in the bottom left hand corner, find the letter:
